DETAILED ACTION

1. Claims 6-22 are pending in this Office Action.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 20-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Minde et al. (US 5,991,717).

As per claim 20, Minde teaches, "method of encoding an audio signal to obtain an encoded base band audio signal", the method comprising the following steps:

"detecting, whether a to be processed passage of the audio signal has a pulse-train-like character or a non-pulse-train-like character, wherein a passage has a pulse-train-like character, when the passage includes a series of pulses having associated therewith a pulse period, and wherein a passage has a non-pulse-train-like character, when the passage does not include a series of pulses having associated therewith the pulse period" (col. 3, lines 6-54); and

"associating a control signal to the encoded base band audio signal, the control signal indicating, whether a passage of the encoded base band audio signal has a pulse-train-like character or not" (col. 3, lines 6-12).

As per claim 22, it is interpreted and thus rejected for the same reasons set forth in the rejection of claim 20.

As per claim 21, Minde teaches, "the step of detecting detects whether a passage has a pulse-train- like character or a non-pulse-train-like character by performing a transient detection in a time domain or a peak-picking operation in the frequency domain" (col. 1, lines 49-64).

Allowable Subject Matter

4. Claims 6-19 are allowed the prior art of record.
